

Midas #400
LITTLE MUD POND

GREENVILLE TWP, PISCATAQUIS CO., MAINE

AREA 13 ACRES

LITTLE MUD POND

Greenville Twp, Piscataquis Co.
U.S.G.S. Lily Bay, Me (7 ½')

Fishes

Brook trout
Yellow perch
Minnows
Lake chub

Golden shiner
Common shiner
Redbelly dace
Finescale dace

Physical Characteristics

Area - 13 acres

Maximum depth - 6 feet

Temperatures:

Surface -
6 feet -

Principal fishery:

Little Mud Pond flows into Prong Pond, east of Moosehead Lake. In 1959 it was reclaimed using rotenone in an attempt to eradicate yellow perch illegally introduced into Prong Pond. Following the reclamation, a brook trout fishery was maintained with annual stockings of fall-fingerling brook trout.

The reclamation of Prong Pond was not successful and yellow perch became established. There is no barrier to fish migration on the outlet between Little Mud Pond and Prong Pond allowing yellow perch to move into Little Mud Pond. Smallmouth bass became established in Prong Pond in the 1970's and white perch were illegally introduced in the 1980's. Both species have access to Little Mud Pond.

Surveyed - January, 1959

Revised - 2003
